

STEPHAN GRIMM

Detecting Intrusion

using Logistic Regression, KNN and Decision Trees

Agenda

- 1 What do we know?
- 2 What determines churn?
- 3 Conclusion

0.42% of connections are harmful

- 48113 connections
- 44 variables
- Classifiers used:
 - Logistic Regression
 - KNN
 - Decision Tree

Logistic Regression is our winner!

Intrusions correctly identified

Logistic Regression

98%

KNN

75%

Decision Tree

68%

Mutliple Variables determine intrusion

Conclusion

- 6/44 Variables influence intrusion most
- 98% of intrusions are accurately predicted
